PROBLEM STATEMENT

To design a game called Hangman. Hangman is a paper and pencil guessing game for two or more players. One player(chooser) thinks or chooses a secret word and another player(guesser) attempts to guess the word by guessing one letter at a time.

Figure: PROBLEM UNDERSTANDING

The chooser draws a number of dashes equivalent to the number of letters in the word.

The guesser chances are tracked using a stick figure drawing of person being hanged from a gallows. The figure is drawn one body part at a time.

Figure: HANGMAN

ALGORITHM

- ▶ Random module to choose a word.
- ▶ Generation of blanks for corresponding word choosen.
- ▶ Input Letter checked with the letters in the random word.
- ▶ If input letter = letter in random word then blank replace with letter.
- ▶ If input letter != letter in random word then chances decrement.
- ▶ For every decrement in chance a body part of Hangman is displayed.
- ▶ Message of win or lose is displayed on screen.

TASK DIVISION

- ▶ DAY 1 : 03/May - 04/May
Started to work on python logic and prepared our presentation.
- ▶ DAY 2 : 04/May - 05/May
Improvised the code with functions. Started understanding commands in Pygame.
- ▶ DAY 3 : 05/May - 06/May
We solved test cases in our python logic.
- ▶ DAY 4 : 06/May - 07/May
We designed code such that Hangman picture is displayed in command prompt.
- ▶ DAY 5 : 07/May
We prepared our final presentation.

CHALLENGES WE FACED

- ▶ Had difficulty in placing spaces in between the blanks.
- ▶ Printing repeated letters in blanks.
- ▶ Displaying number of chances.
- ▶ Printing Hangman on command prompt.
- ▶ Faced difficulty in stopping iteration even after game ends.

CODE STACKS

1. Number of functions : 1
2. Number of lines of code : 99
3. Number of commits :35
4. Size of repository : 1.8 MB

LEARNINGS

1. How to create repository in Git.
2. How to use LaTeX for presentation.
3. Learned to solve a task using python logics.
4. Learn, Collaborate and implement.
5. Working in teams remotely.

TECH STACKS

1. Python
2. Gitlab repository
3. LaTeX
4. Vim editor

FUTURE SCOPE

There is a chance to improvise our project with graphical interface using Pygame

Figure: OUTPUT

```
C:\Users\mohit>python hangman1.py  
start the game
```

```
-----  
enter an alphabet : k  
your guess is correct  
_ _ _ K  
you have 6 more chances
```

```
|  
|  
|  
|  
|  
|  
|
```

```
enter an alphabet : b  
your guess is wrong  
you have 5 more chances
```

```
|  
|  
|  
|  
|  
|  
|
```

```
enter an alphabet : a  
your guess is correct  
_ A _ K  
you have 5 more chances
```

```
|  
|  
|  
|  
|  
|  
|
```
